

# Production Controller for Garment Manufacturing

*Is it difficult to monitor and control your production process?*

*Is it time consuming to collate critical production management information?*

*Can your operators see the full production process from your current system?*

*Can you produce all key production and manufacturing documentation from your current system?*

*Do you want to provide your customers with a more responsive service?*

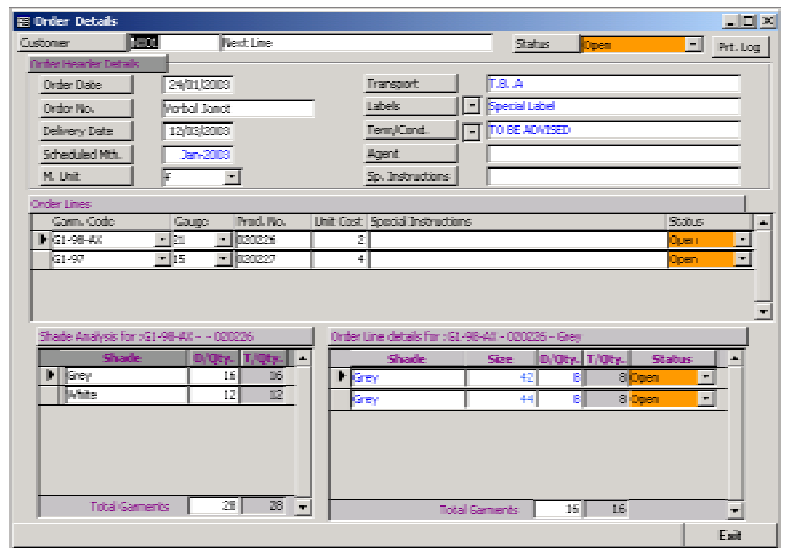

Production Controller is a simple to use system providing a comprehensive range of functions, which allows you to monitor and control the production and manufacturing process. Information relating to product, materials, production operations, orders and customers is available through its easy to use interfaces. Production Controller is designed around a base module with four principal sections – Garments; Customer Orders; Production; Management Reporting.

## Garments section

- Record general details about garments, associated production operations and materials.
- Maintain costing and timing information against each garment.
- Facility to apply percentage overheads including labour, material and productivity allowance.
- Produce a full range of management reports relating to manufacturing costs.
- Produce customer price lists.

## Customer order section

- Record customer's details and orders.
- Produce a range of manufacturing documentation including production sheets, production tickets and order confirmations.

## Production section

- Provides the ability to control the production process using a pre-determined series of production 'gates'.
- Update the system as production passes through each 'gate' by using the ticket update facility.

## Management reporting

- A full range of configurable management reports including:
  - Production costs.
  - Order status.
  - Work in progress valuation.
  - Production schedules.

## Additional modules

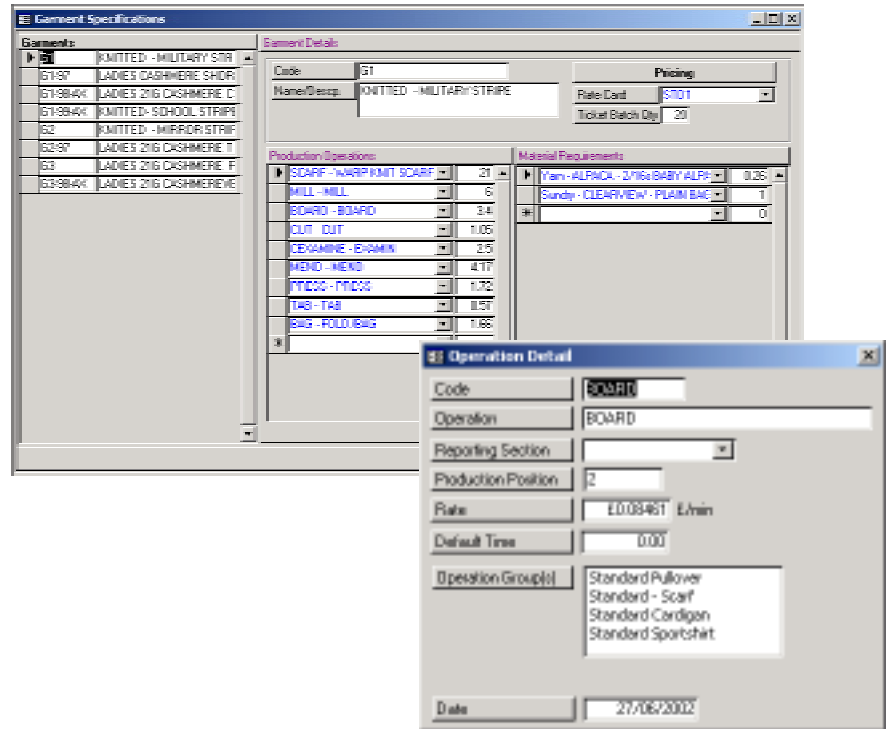

Production Controller is designed to be flexible, so it can either be used straight from the box or it can be configured to suit each client's individual specification. The system can be further enhanced to provide additional modules, for example:

- e-business module that allows operators to send order confirmations and dispatch confirmations by e-mail.
- On-line module which allows operators to update production progress via PCs located at each production 'gate'

## Features

- Full production order processing.
  - Production documentation.
  - Customer documentation.
- Full garment specification.
  - Production operation details.
  - Production material details.
- Supplier details.
- Full production control.
- Configurable production 'gates'.
- Configurable production reporting.
- Production monitoring.
- Management reports.
  - Production costs.
  - Order status.
  - Work in progress valuation.
  - Production schedules.

## Benefits

- Provides a dedicated production database.
- Reduces the cost of managing the production process.
- Improves management control of the production process.
- Provides a single point of access for all production and manufacturing information.
- Enables you to provide a more responsive service to your customers.

## Technical specification

<b>OS</b>	Windows 98,ME,NT, 2000, XP
<b>Hardware</b>	Minimum: Pentium II, 64 MB RAM (Recommended: Pentium III, 128 MB RAM) Required disk space dependent on database size.

V4 Solutions is an independent company specialising in the provision of software solutions to small and medium sized enterprises.

We develop and build systems using established software to meet the exact specification of each customer. We work closely with the customer from the initial specification and design stage right through to implementation to ensure that the final solution fully meets the customer's requirements and delivers real business benefits.
